

Franklin County Auditor's Office Parcel Viewer Application <https://franklincountyauditor.com/parcelviewer>

The Parcel Viewer allows you to find parcel information by using a map. This document explains how to find parcel information using features in the Parcel Viewer. Should you need assistance with the application, please contact the Franklin County Auditor's GIS Department at GIS@franklincountyohio.gov or at (614) 525-7272.

Search Parcel Data

The Search Parcel Data tool is a useful way to search for a parcel. It provides various ways to search for parcel records they may need. You can search by value, shape, or by distance.

By Shape

Searching by shape allows you to zoom to an area, draw your area of interest on the map, and return all records within the area that was designated.

By Value

Searching by value gives you the option to search by parcel ID, subdivision or condominium name, annexations, or special tax districts. When searching by value, select the data layer of interest via the first drop down. Using the second dropdown, select the field (i.e. parcel ID,

By Spatial

This tab lets you search based on a distance. First, find a parcel using the By Value or By Shape tab. Next, for a distance to appear on the map, go to the By Spatial tab, enter the

distance, and press Apply Buffer . Then press  or  to select parcels that are either entirely within the distance or have a part that is within the specified distance.

Results

Results from searches are displayed in this tab. One feature of this tool is that it will export all records returned into a CSV file that can be downloaded and opened as a text file or with Microsoft Excel. To download files, click the three dots on the upper right side. You can also clear your results on this menu or on the original tab.

Identify

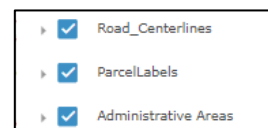

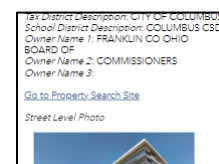

Search by point, line, or polygon to return one or more records. A link is given for you to go to the property search site to get more details on the property.

Layer List

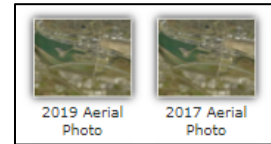

To make a layer visible within the map, click the check box to make the layer visible on the map. The layers with gray text are not visible the current zoom level.

Basemap

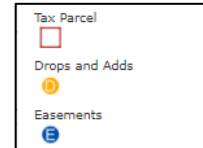

The Basemap tool changes the aerial photography or street maps. You can create a hybrid base map by clicking the green plus sign located when you hover over the bottom of each basemap thumbnail.

Legend

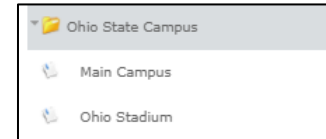

All visible layers and their symbols will be shown. This window allows you to accurately read layers and what you are seeing within the map.

Bookmarks

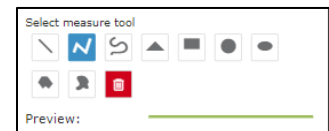

You can use the bookmark widget to quickly zoom to places of interest.

Measure & Draw

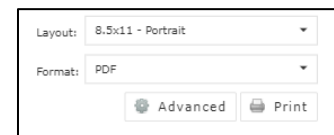

Measure and draw interactively on the webmap. Width, length, and area will be displayed as appropriate.

Print

Create an export of the map on screen that can be printed or saved. Use the dropdowns to select the size and the format of the export. The application displays a ribbon that may take several minutes to complete. When the ribbon disappears, click on the name to download the file.

Pictometry

The Pictometry tool allows you to see aerial views at an angle from all four directions. After opening the tool, select the location on the map and the imagery will appear in the window. The main map shows the extents of the area being displayed.

Street Smart

The StreetSmart tool allows you to see images of a property from the street in 360-degree view. Zoom into a property and open the tool. Small point features be added to the map. Click a point and the imagery will display in a window.

Share

The Share tool allows you to share a link to the Parcel Viewer application at the same extent as when the tool was opened.
